

## **Sterilization / Infection control**

At All West Dental we follow Sterilization and Infection Control protocol as described in *Infection Prevention and Control in the Dental Office*. This document outlines protocol and general minimum standards used in Dental Offices in Canada. The document was drafted by the Committee on Clinical and Scientific Affairs with the Canadian Dental Association. If you have specific questions regarding our procedures and protocol, please feel free to discuss with a Dental Health Care Professional during your next visit to our office.
